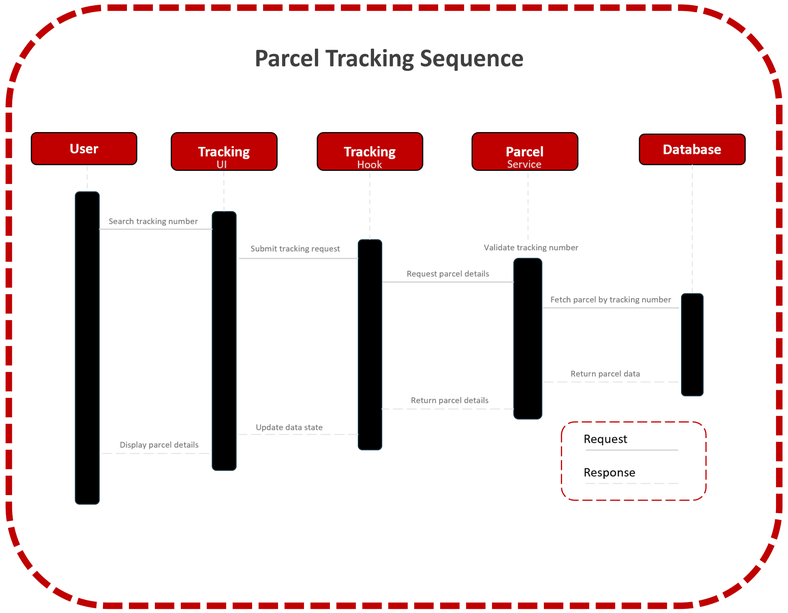
Parcel Wizard

Ollscoil Teicneolaíochta an Atlantaigh
Atlantic Technological University

Sequence Diagram



Summary

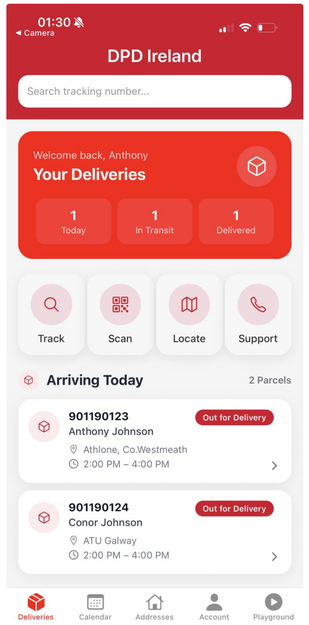
This project involved the redesign and development of a modern **DPD Parcel Wizard mobile app** to improve the customer parcel delivery experience.

- Track Deliveries
- View Delivery Schedules
- Manage Delivery and Account Details

The system was built using a **modular mobile app architecture**, focusing on **usability, scalability, and modern UI/UX design**.

The final result is a realistic prototype that provides DPD customers with a modern user experience that gives them full control over their deliveries.

Home Screen



Quick Parcel Access

Users can instantly search for a parcel from the home screen using a tracking number, reducing the number of steps needed to access delivery information.

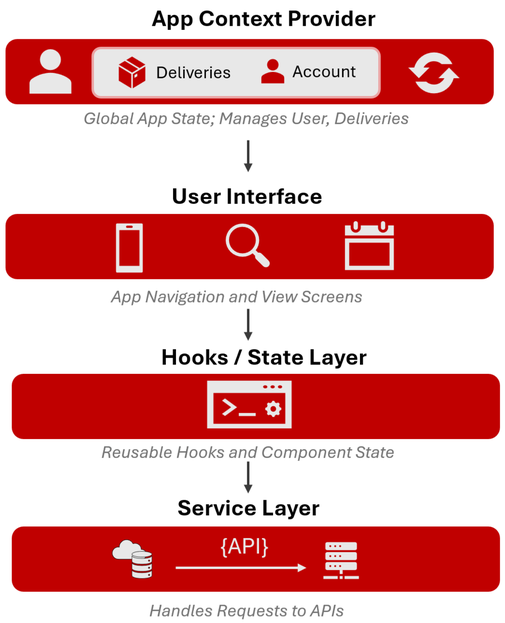
Fast Access

Key features such as **tracking, QR scanning, DPD site location, and support** are placed directly on the home screen to improve convenience and reduce navigation time.

Delivery Overview

The home screen provides a clear summary of parcels that are **arriving today, in transit, or delivered**, allowing users to see important delivery information.

Architecture Diagram



Technologies Used

Frontend
- React Native
- Expo
- Expo Router

Backend
- Python
- FastAPI
- PostgreSQL

Architecture
- Custom Hooks
- Service Layer
- Mock Data Layer

Planning & Design
- Figma
- Jira

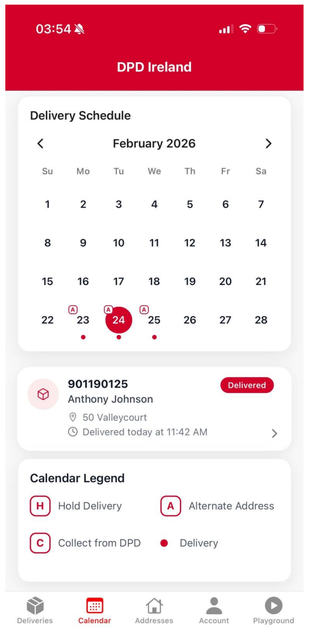
Calendar Screen

Interactive Delivery Calendar

This screen was designed to improve delivery visibility by allowing users to quickly identify days with expected parcel activity.

Schedule Management

Users can create delivery instructions such as **hold delivery, redirect to another address, or collect from a DPD location**, helping them manage deliveries more flexibly.

Clear Visual Feedback


Icons, visual markers, and a calendar legend were used to ensure delivery actions are easy to understand.
